1 Introduction

This report details the results of air pollution measurements made on the London Air Quality Network during 2010. Measurements have been presented with specific reference to the UK Air Quality Strategy (AQS) Objectives and the EU Limit Values.

The London Air Quality Network (LAQN) is a unique resource, providing robust air pollution measurements that are essential to underpin air quality management and health studies. The public face of the network, the London Air web site (www.londonair.org.uk), is visited by thousands of Londoners seeking hourly updated air pollution information.

The LAQN was formed in 1993 to coordinate and improve air pollution monitoring in London. The majority of London's 33 boroughs supply measurements to the network and in addition these data are increasingly being supplemented by measurements from local authorities surrounding London, thereby providing an overall perspective of air pollution in London and the Home Counties.

The LAQN is operated and managed by the Environmental Research Group (ERG) at King's College London. QA/QC audits are carried out by the National Physical Laboratory (NPL). Each borough funds air quality monitoring in its own area. The Department of Environment, Food and Rural Affairs (Defra) funds King's to operate the Marylebone Road site and to maintain several of the LAQN sites as affiliate sites to the UK Automatic Urban and Rural Network (AURN). This Defra support assists the operation of the overall LAQN. Analysis of LAQN measurements has been augmented by measurements from directly-funded Defra sites in London. Measurements from Defra sites were provided by AEA from the National Air Quality Archive and were included within the LAQN database. Transport for London has also funded monitoring to help assess the air pollution impacts of the Congestion Charging Scheme and Low Emission Zone.

2 Air quality Strategy Objectives and EU Limit Values

There is ample evidence of the adverse health effects caused by air pollution (WHO, 2006). In response to these health impacts, the Air Quality Strategy (AQS) for England, Scotland, Wales and Northern Ireland (Defra, 2008) sets out the UK's way forward on air quality issues, details objectives to be achieved, and proposes measures to help reach them. These UK objectives largely reflect EU Limit Values (EC, 2008). The GLA and the London boroughs and district councils outside the capital have responsibilities for the management of air quality and must work towards the attainment of AQS objectives. The AQS Objectives and EU Limit Values are detailed in Table 1. Monitoring progress towards the attainment of these Objectives and Limit Values forms a core activity for the LAQN.

| Pollutant | Air Quality Objective Concentration | Measured as | To be achieved by |
|--|---|-----------------------------------|-------------------|
| Carbon Monoxide (CO) | 10.0 mg m ⁻³ | Maximum daily running 8-hour mean | 31 December 2003 |
| Nitrogen Dioxide (NO ₂) | 200 µg m ⁻³ not to be exceeded more than 18 times a year | 1-hour mean | 31 December 2005 |
| | 40 µg m ⁻³ | Annual mean | 31 December 2005 |
| Sulphur dioxide (SO ₂) | 350 µg m ⁻³ , not to be exceeded more than 24 times a year | 1-hour mean | 31 December 2004 |
| | 125 µg m ⁻³ , not to be exceeded more than 3 times a year | 24-hour mean | 31 December 2004 |
| | 266 µg m ⁻³ , not to be exceeded more than 35 times a year | 15-minute mean | 31 December 2005 |
| Ozone (O ₃) | 100 µg m ⁻³ not to be exceeded more than 10 times a year | 8 hourly running or hourly mean | 31 December 2005 |
| Particles (PM ₁₀) (gravimetric) | 50 µg m ⁻³ , not to be exceeded more than 35 times a year | Daily mean | 31 December 2004 |
| | 40 µg m ⁻³ | Annual mean | 31 December 2004 |
| Particles (PM _{2.5}) (gravimetric) | 25 µg m ⁻³ (target) | Annual mean | 2020 |
| | 20% cut in urban background exposure | Annual mean | 2010 - 2020 |

Table 1: AQS Objectives and EU Limit Values.

3 Results

The AQS Objective results measured at LAQN sites during 2010 are detailed in Tables 2 to 8.

Key to site types:

| | | |
|----|---|------------------|
| RU | = | Rural |
| S | = | Suburban |
| U | = | Urban background |
| R | = | Roadside |
| K | = | Kerbside |
| I | = | Industrial |

3.1 Carbon Monoxide

| Site Name | Type | Capture Rate (%) | No occurrences of rolling 8hr mean $\geq 10\text{mgm}^{-3}$ (8.6ppb) | Achieved? |
|--|------|------------------|--|-----------|
| Bexley - Slade Green | S | 93 | 0 | yes |
| Brent - Kingsbury | S | 68 | 0 | n/a |
| Bromley - Harwood Avenue | R | 49 | 0 | n/a |
| Camden - Bloomsbury | U | 97 | 0 | yes |
| City of London - Walbrook Wharf | R | 21 | 0 | n/a |
| Crystal Palace - Crystal Palace Parade | R | 56 | 0 | n/a |

Table 7: AQS Objective results for PM_{10} .

All PM_{10} measurements have been converted to gravimetric equivalent by the methods recommended in Defra's Local Air Quality Management Technical Guidance (Defra, 2009), i.e. TEOM measurements have been corrected using the Volatile Correction Model (VCM) and BAM measurements have been multiplied by 0.83.

3.7 PM_{2.5}

| Site Name | Type | Instrument | Capture Rate (%) | Annual Mean $\mu\text{g m}^{-3}$ uncorrected |
